HPE ProLiant Compute

Create a competitive foundation

HPE SMB Solutions for General Purpose

Remove barriers to success

As a small to midsize business (SMB), you've got to keep moving at full speed to keep up with customer expectations — and the competition. But in today's "digital everything" workplace, it can be challenging to provide flexible IT resources to meet a variety of modern business demands.

If you're using laptops, PCs, cloud applications, or even an older server to run the business, it may be time for an upgrade. But finding the right solution can be a challenge as well. Specialized server solutions can be costly because they include more bells and whistles than are required. But the one-size-fits-all approach never seems to fit right either.

HPE
GreenLake

For many SMB needs, one or two modern, flexibly configured servers can provide everything you need to keep moving at top speed, without breaking the bank — and keep the competition at bay.

HPE SMB Solutions for General Purpose are built on flexible configurations of HPE ProLiant rack and tower servers, optimized for general purpose workloads. They come in a variety of sizes suited — and priced — to meet your needs.

Enterprise proven, sized right

HPE SMB Solutions for General Purpose are based on HPE ProLiant Gen10 rack and tower servers in low-cost, basic server configurations you can customize by adding one of the recommended modules. These modules provide the following functionality:

- **File and print:** Low cost high capacity HDD based file storage with sufficient memory to run print jobs and the operating system.

- **Infrastructure:** Memory capacity to load various Active Directory, DNS, and DHCP databases into memory for service responsiveness, with sufficient storage for the operating system and infrastructure data.

- **Utility:** Increased memory and SSD based storage capacity to support large data sets and improved analytics and reporting performance for workloads like endpoint security and management.

- **Multifunction:** A balance of memory and storage with sufficient capacity and performance capable of handling mixed workloads and even light virtualization to help segregate workloads.

Get the IT you need, now

HPE Financial Services offers simple IT equipment financing, asset lifecycle solutions, and finance options designed to help SMBs seize opportunities to evolve and thrive.

Simplify with services

HPE Services help you tap into the expertise to simplify operations and do more with less. HPE Services help you innovate to keep ahead of risks like competitive and security threats. A variety of offerings — from advising on best practices and project-based engagements to operational support services — keep your environment running efficiently and reliably.

Easily evolve to hybrid cloud

HPE SMB Solutions for General Purpose can be easily extended to hybrid cloud for additional disaster recovery options with cloud services from Microsoft Azure or a managed service provider.

It's all about choice

Start on your digital transformation goals with your choice of validated solutions that are sized to meet your current and future IT needs. Choose from HPE ProLiant Gen10 for price optimized performance, Gen10 Plus for balanced workload performance, or Gen11 for maximum performance and longevity for gradual standardization plans. Contact your authorized HPE representative to find out more.
