

Keep pace with performance demands

HPE Solutions for Database and Applications

Host apps and data on-site

These days, it seems like there's an app for everything. While that can be convenient, it can also impact database performance.

As the number of applications small to midsize businesses (SMBs) run increases, so do database sizes. And if your legacy hardware can't keep up with demand, straining databases can slow application performance, impede your ability to maintain proper data and transaction logs, and make it difficult to maintain high availability.

While cloud may seem like a good option, the cost of hosting databases in the cloud can skyrocket without warning, and any interruption in internet service could be a disaster.

HPE Solutions for Database and Applications are designed to overcome these challenges. They can help SMBs take control of cloud-based apps and data with an on-site solution tuned to run your business applications for better performance and data security, enabling you to avoid unexpected cloud subscription costs and service outage downtime.

Solution brief

HPE Flex Offers

Maximize your savings with HPE Flex Offers.

iQuote Universal

Browse popular HPE server, storage, and networking products and [create fast, accurate configurations](#) that you can export to request a quote.

Get the IT you need, now

HPE Financial Services offers simple IT equipment financing, asset lifecycle solutions, and finance options designed to help SMBs seize opportunities to evolve and thrive.

Simplify with services

HPE Pointnext Services help you tap into the expertise to simplify operations and do more with less. HPE Pointnext Services help you innovate to keep ahead of risks like competitive and security threats. A variety of offerings—from advising on best practices and project-based engagements to operational support services—keep your environment running efficiently and reliably.

Keep up with data demands

HPE Solutions for Database and Applications are built on [HPE ProLiant Gen10](#) rack and tower server configurations optimized for database workloads in a variety of sizes suited for SMBs. You can even opt to add external HPE MSA storage for more demanding database workloads.

These solutions enable:

- **Performance:** Prevent performance issues as databases grow.
- **Compliance:** Retain control of your database and applications with solutions that are hosted and stored on-premises to maintain compliance with regulations or other business needs.
- **Availability:** Keep services running around the clock with systems designed to ensure continuous uptime.

Easily evolve to hybrid cloud

HPE Solutions for Database and Applications can be easily extended to hybrid cloud for additional disaster recovery options with cloud services from Microsoft Azure or a managed service provider.

Take the next step

With a choice of optimized configurations, you can select just the right solution to improve application performance, compliance, and availability. Contact your authorized HPE representative to find out more.
